

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

ved with Marble, and many footsteps of Antiquity; an argument, that Towns have stood there in former ages, which have been overwhelmed by the Matter cast out of this Mountain. They have also found several Bridges of Pumice-stones, doubtless made by the flux of the fiery Torrents, the Earth being very much raised since.

Now whether these Eruptions are caused by actual subteraneous Fires, lighting upon combustible matter; or by Fire struck out of falling and breaking stones, whose sparks meet with Nitro-sulphureous or other inflammable substances heap'd together in the bowels of the Earth, and by the expansive violence of the Fire forc'd to take more room, and so bursting out with the impetuosity we see; may not be unworthy of a Philosopher's speculation.

An Account

Concerning a Woman having a Double Matrix; as the Publisher hath Englished it out of French, lately printed at Paris, where the Body was opened.

This Figure (which in the *Cut* here annex'd is the II.) represents the two

* It may be, that that, which is by M. Vassal, Publisher of this * Matrixes, Relation, esteem'd a second Womb, is nothing else, but the true found *januar. 6* Matrix lengthen'd, or that, which by Anatomists is call'd Tuba Fal- 1669. by Benoit lopii. See. Bartol. *Anatom. Reform. l. 1. c. 27. and others.* Vassal Chirurg-
geon, opening the Body of a woman of 32. years of age, of a sanguin Con-
stitution, and a masculin port. These two Matrixes were so well disposed
by an extraordinary contrivance of Nature, that the True one had con-
ceived eleven severall times, viz. 7. males and 4. femals, all born at
the full time, and all perfectly wellform'd; but they were at last follow'd
by a brother yet a *fetus*, that was conceiv'd in an adjunct *Uterus*, in a
place so little capable of distension, that seeking enlargement, after it had cau-
sed to the Mother for two months and an half grievous symptoms, did at
last, being of the age of about 3. or 4. months, break prison, and found
its grave in that of its mother, by a very great effusion of blood in the
whole capacity of her *abdomen*; which cast the mother into such violent
convulsive motions for 3. days together, that she dyed of them. VVhere-
upon the said Vassal, after having embalmed the parts, he had made
at his house for a whole month together the particular dissection thereof,
before all the most Curious and knowing Physitians, Chirurgeons, Apo-
thecaries, Mid-wives, and other Searchers of Nature, that are in *Paris*,
thought good to preserve the History thereof by committing it and the
Figure of the parts spoken of, to the Press, together with a Table, for
better explanation; which we think fit here to annex in *Latin*:
